Me

My name is Nicolay, and I'm a programmer. I didn't fully realise this until I was about 22 years old, but after my epiphany I've devoted more than half of my waking hours to program computers to do my will, with varying success.

In 2013 I graduated from the Norwegian University of Science and Technology with an M.Sc. in computer science. During my studies I spent about 10 hours weekly in extra-curricular activites (including being the webmaster for a large-scale IT conference and sitting on the board for a student festival). Additionally I spent one year abroad, attending the computer science graduate program at the University of California, San Diego where I graduated with a GPA of 3.902.

Employment

Technology consultant, BEKK Consulting, 2013 - present
Summer intern, Capra Consulting, 2012
Summer intern, Inspera, 2011

Education

Master of Science, Computer Science
Norwegian University of Science and Technology
August 2008 - June 2013

Graduate Program Exchange Student - Computer Science
University of California, San Diego
August 2011 - June 2012

Skills

Front-end development (javascript/coffee-script, sass/less), back-end development (ruby, java, c#), systems management (centOS, ubuntu, puppet, docker), and development practices/paradigms (functional (reactive) programming, kanban, git, TDD).

Side projects

Ballot (ballot.cc)
Ballot is a website for creating and voting on polls which can be shared with others.

Stump (nhh.co/stump)
Stump is a minimal logging wrapper for rack-based web applications.

Moviepicker (nhh.co/moviepicker)
Moviepicker is a small website which suggests movies for you based on the rotten tomatoes API and IMDB ratings. It was created to demonstrate functional reactive programming.
